

Centralized direct electric heating

Direct electric heating is the use of resistive elements that convert electricity in to heat.

Calculator

Assumptions

Next tables contain the assumptions that have been introduced in the Centralized direct electric heating model of the calculator.

Efficiency [%]	
2011-2050	
100	
Emissions	
	2011-2050
CO ₂ -eq. emissions [kgCO ₂ -eq./kWh _{th}]	They depend on the electricity production.
Deposited waste [UBP/kWh _{th}]	
Cost	
	2011-2050
Specific investment [CHF ₂₀₁₀ /kW _e]	284
