

# Swiss industry mix

The evolution of the production quantities for each group of industry is expressed as a production index (100 = production in 2010). The values shown in the table are necessary to calculate the [energy intensity](#) of the Swiss industry for each of the scenarios presented in PROGNOS 2012 <sup>[1]</sup>.

Production indexes by groups [-]					
High energy intensity		Medium energy intensity		Low energy intensity	
2035	2050	2035	2050	2035	2050
78	59	105	103	125	140

The reader will find more information about assumptions and parameters for the different scenarios in the chapters 7.4.3; 8.4.3 and 9.4.3 of PROGNOS 2012 <sup>[1]</sup>.
